Profile

Technical Support Consultant with 4+ years of experience supporting M2M and IoT platforms in the telecommunications sector. Strong hands-on background in Linux-based systems, Kubernetes environments, monitoring (Prometheus, Grafana), and automation using Bash and Python. Focused on ensuring system stability and continuously improving operational processes, with additional experience in cloud and infrastructure technologies gained through a personal project.

Skills

OS & Scripting: Linux, Bash, Python

Databases: SQL

Monitoring: Prometheus, Grafana, Kibana

Cloud/IAC: AWS, Terraform

Containers: Docker, Kubernetes

CI/CD: Github Actions, Git

Projects

Cloud Resume Challenge (AWS, Terraform, CI/CD)

- Designed and deployed a cloud-based resume using AWS (S3, Lambda, DynamoDB, IAM)
- Managed infrastructure using Terraform (IaC)
- Implemented CI/CD pipelines with GitHub Actions for frontend and backend
- Developed backend logic in Python and automated tests using Cypress
- Deployed a secure, HTTPS-enabled static website with custom domain

Job Market Analyzer (Python, Streamlit, Docker)

- Built a Python scraper for one of the IT job boards API to monitor real-time hiring trends
- Developed a mapping engine to group technology synonyms (e.g., K8s/EKS → Kubernetes) for accurate stats
- Created an interactive Streamlit & Plotly dashboard to display the Top 15 "must-have" skills
- Implemented a 7-day caching logic to reduce API load and prevent IP rate-limiting
- Fully Dockerized the app for environment parity and easy deployment

Professional Experience

Comarch S.A.

Senior Technical Support Consultant, 2021 - present

- Supported and maintained M2M/IoT platforms running in Kubernetes clusters and VM-based environments, ensuring alignment with ITIL processes
- Ensured stability and reliability of production systems through proactive monitoring, disk space management, and routine operational maintenance on Linux servers

- Investigated and resolved production incidents using logs and monitoring tools (Prometheus, Grafana, Kibana)
- Automated operational tasks using Bash and Python, improving system observability and reliability
- Worked closely with development teams on bug reproduction, root cause analysis, and production fixes
- Participated in on-call rotations supporting mission-critical systems (24/7)

Education

Cracow University of Technology

B.Eng. in Computer Science, 2021

Certificates

AWS Certified Cloud Practitioner

Issued January 2025
