# Jarosław Łaba

jarek.laba@gmail.com github.com/jaylaba9 jaylaba.com

## Profile

System Engineer with a solid background in Linux operations and infrastructure management. Primary administrator for post-deployment projects, responsible for Kubernetes cluster configurations, application deployments, and maintaining GitOps workflows. Acts as the L3 escalation point for complex infrastructure issues and requests. Focused on infrastructure reliability and task automation using Ansible, Python, Bash and CI/CD pipelines. Looking to expand expertise in public cloud platforms.

## Skills

**OS & Scripting:** Linux, Bash, Python

**Cloud/IAC:** AWS, Terraform, Ansible

**Containers:** Docker, Kubernetes

**CI/CD:** Git, GitHub Actions, GitLab CI/CD, GitOps

## Projects

**Cloud Resume Challenge (AWS, Terraform, CI/CD)**

- Designed and deployed a cloud-based resume using AWS (S3, Lambda, DynamoDB, IAM)
- Managed infrastructure using Terraform (IaC)
- Implemented CI/CD pipelines with GitHub Actions for frontend and backend
- Developed backend logic in Python and automated tests using Cypress
- Deployed a secure, HTTPS-enabled static website with custom domain

**Cloud-Native FastAPI Microservice (AWS, Docker, Terraform)**

- Developed a backend application using Python (FastAPI) to manage CRUD operations
- Built and managed IaC via Terraform, configuring a Multi-AZ environment
- Infrastructure deployed on AWS using custom VPC, ECS Fargate, RDS, ALB, IAM
- Containerized using Docker (build optimized via slim image + layer caching)
- Adopted a "Security First" approach, isolating the PostgreSQL database in a private subnet and securing credentials via AWS Secrets Manager
- Implemented centralized logging using AWS CloudWatch

## Professional Experience

**Comarch S.A.**

*System Engineer/DevOps, 07.2026 - present*

- Managing post-deployment OpenShift and Kubernetes clusters provisioned on OpenStack private cloud infrastructure.
- Administering stateful workloads and core platform components, including Elasticsearch, Kafka, and PostgreSQL, acting as L3 support for non-standard infrastructure incidents.
- Executing application deployments and cluster configuration changes via GitOps workflows, utilizing existing GitLab CI/CD pipelines.

- Automating daily operations and configuration management using Ansible, Python, and Bash, aided by AI tools (Augment Code, Gemini) for faster script refactoring and repository analysis.

**Comarch S.A.**
*Senior Technical Support Consultant, 07.2021 - 06.2026*
- Supported and maintained M2M/IoT platforms across Kubernetes and VM-based environments.
- Investigated and resolved production incidents through log analysis and system observability tools.
- Developed Bash and Python scripts to automate routine operations and reduce toil.
- Collaborated with engineering teams on root cause analysis (RCA) and bug reproduction for mission-critical systems.

## Education

**Cracow University of Technology**
*B.Eng. in Computer Science, 2021*

## Certificates

**AWS Certified Cloud Practitioner**
Issued January 2025
